

Static Cosmology

Data Exercise 2

Haeon Jeong

Due 2026-09-13 23:59

Topic

Redshift and Medium Extinction

Submission

Submit one ZIP archive containing report.pdf and the requested data table. Record the catalog and calibration versions in the report. The maximum file size is 25 MB.

Problems

1. Solve the first displayed relation used in Redshift and Medium Extinction. State all assumptions and conventions.

$$d \ln \nu / ds = -\eta_\nu(\rho_m, T_m)$$

2. Estimate a nontrivial case using the second relation. Carry units and uncertainty where applicable.

$$1 + z = \exp\left(\int \eta_\nu ds\right)$$

3. Analyze the third relation in two limiting regimes and explain the physical meaning of the result.

$$\sigma_{line}^2 = \int D_\nu ds$$

Show enough intermediate work that another student can reproduce the calculation.
